Program Scope
Sociology examines the social aspects and dimensions of most
everything human beings do in the realm of politics, economics, culture,
technology, relationships, and identity. Studying sociology provides
students critical and reflexive perspectives with which to understand
the world. It pushes students to develop the analytical, research, and
compositional skills necessary to investigate, understand, analyze,
and explain, and improve the world around them. Courses cover a broad
range of topics including: the study of individuals as social actors; the
analysis of social processes such as social interaction and deviance
and conformity; the study of institutions such as law, family, media,
popular culture, medicine, education, and religion; and the investigation
of the social organization of entire societies in the global context. The
department offers a variety of courses of interest to non-majors as well
as to majors.

Career Outlook
Upon completion of a B.A. in Sociology, students can continue their
education with graduate work in either sociology or in some related field
such as social work, public administration, or law. For students who
choose to pursue employment with their bachelor's degree, sociology
provides an excellent liberal arts foundation for a range of career paths
that utilize their sociological insights as well as the conceptual and
methodological skills they have acquired. Training in sociology can
open a variety of doors in human services and in business. Those who
enter human services may work with youths at risk, the elderly, or people
experiencing problems related to poverty, substance abuse, or the justice
system. Some find employment in agencies that work for social change
including various organizations concerned with human rights issues or
the environment. Sociology majors who enter the business world work in
sales, marketing, customer relations, or human resources.

In addition, the sociology major has a competitive advantage in today’s
information society. The solid base received in research design, data
analysis, statistics, and sociological concepts enables them to compete
for support positions in research, social planning, policy analysis,
program evaluation, and other social science endeavors.
