BACHELOR OF ARTS IN GENERAL BIOLOGY

Impaction
All Biology concentrations are currently impacted which means there are more applications than capacity. Transfer student applications for admission to this major are accepted by the University's Office of Undergraduate Admissions only during the application filing period of October 1 to November 30 (for admission the following fall). No late applications or applications for spring will be considered. Both new transfer and on-campus students wishing to change majors are required to submit an additional departmental application. See departmental website biology.sfsu.edu (http://biology.sfsu.edu) for supplemental program application and deadlines.

General Information and Requirements
• Candidates entering the bachelor’s programs in biology should have completed three years of high school mathematics and one year of high school chemistry to allow completion of the curriculum in a timely fashion (see Undergraduate Admission Requirements (bulletin.sfsu.edu/undergraduate-admissions/application-procedures/#UAR)).
• All major coursework must be completed with letter grades (CR/NC is not acceptable).
• A minimum grade point average of 2.0 in all coursework is required to receive a degree in these programs.
• To remain enrolled in a biology course, students must be prepared to provide copies of transcripts demonstrating completion of prerequisite courses with a grade of C- or better.
• At least 12 units in biology must be completed at SF State.
• Early in the first semester, and at regular intervals thereafter, students must consult with a biology advisor to plan a program of study. For the most current advising information, go to biology.sfsu.edu (http://biology.sfsu.edu).

Program Learning Outcomes
Core Competencies
1. Understanding the Process of Science: Students will demonstrate how a theory is supported or can be rejected based on data from experiments.
2. Quantitative Reasoning: Students will be able to create graphs and perform simple statistical tests to determine whether or not differences between groups are significant.
3. Relationship Between Science and Society: Students will be able to explain a biological process or phenomenon as it relates to a societal issue.

Core Concepts
1. Evolution: Students will be able to understand the fundamental concepts of evolution, role of selective pressures, how genes change
2. Relationship Between Structures and Function: Students will be able to describe how variation in the structure of an organ in a plant or animal contributes to variation in its function
3. Information Flow and Storage: Students will be able to explain the transmission of heritable traits

Graduation Writing Assessment Requirement (GWAR)
(Note: Prior to fall 2012, GWAR would have been satisfied by passing ENG 414 (or ENG 410 or ENG 411 for CMS students) or a GWAR designated course from another discipline.)

Students must earn a C or better in a GWAR course to satisfy the requirement.

Biology majors have flexibility for which GWAR course they can take to meet their requirement, as long as the prerequisites for the course have been completed.

In general,
• Cell & Molecular Biology majors should take BIOL 351GW;
• Microbiology majors should take BIOL 402GW;
• Botany, Ecology, and Zoology majors may choose between BIOL 475GW, BIOL 478GW or BIOL 529GW;
• Marine Biology majors may choose between BIOL 570GW or BIOL 631GW; and
• Physiology majors may choose between BIOL 613GW or BIOL 631GW.
• General Biology majors may take any BIOL GWAR class.

See also the Department of Biology home page for GWAR in Biology: biology.sfsu.edu/content/gwar (http://biology.sfsu.edu/content/gwar) or contact a departmental advisor for further information.

The department does not permit multiple concentrations within the biology degree program. All of the curricula require preliminary work in physics and chemistry because many important biological concepts are based squarely upon principles in the physical sciences. Also, each curriculum includes upper-division work in the biological sciences so that students will receive reasonable breadth and depth in their degree program. Because of the sequential arrangement of courses students are urged to consult the descriptions for the prerequisites of all their courses.

Although course electives are listed for most of the majors, new electives are always being added to various programs. Therefore, we highly recommend that students seek advisement prior to enrolling in elective courses in their major.

Bachelor of Arts in Biology, General
The curriculum in general biology provides students with exposure to a broad spectrum of biological sciences including genetics, cell biology, physiology, ecology, organismal and evolutionary biology. Since basic principles of physical science are central to many biological concepts, coursework in physics and chemistry is included in the lower-division requirements. The B.A. program is suited for students preparing for professional schools, including teacher credentialing programs, or careers that require students to be versed in diverse areas of biology.

Students preparing to become teachers should note that additional science preparation beyond the major is required (geosciences breadth: meteorology, astronomy, geology, and oceanography). It is important to consult early and often with a credential advisor in the biology department to plan the major and keep abreast of any state-mandated changes in requirements.
General Biology (B.A.) — 57 units

General Education Met in the Major

General Education requirements met in the Biology major (all concentrations) or Undeclared with Interest in Biology:
The requirements below are deemed "met in the major" upon completion of the courses listed (even though the courses and their prerequisites are not approved for GE). This is true whether or not the student completes the major.

- Area B1 (Physical Science) is satisfied upon completion of CHEM 130 or CHEM 233.
- Areas B2 (Life Science) and B3 (Laboratory Science) are satisfied upon completion of BIOL 240.
- Upper-Division General Education, Physical, and Life Sciences (UD–B) is satisfied upon completion of BIOL 355.

Lower-Division Requirements (32–33 units)

Select one physiology course:  
- BIOL 443: Microbial Physiology  
- BIOL 454: Parasitology Laboratory  
- BIOL 317: Plant Physiology  
- BIOL 327: Human Physiology Laboratory  
- BIOL 330: Animal Physiology Laboratory  
- BIOL 482: Ecology

Select one cell biology course:  
- BIOL 350: Cell Biology  
- BIOL 358: Forensic Genetics: Math Matters  
- BIOL 401: General Microbiology  
- BIOL 435: Immunology  
- BIOL 453: General Parasitology  
- CHEM 349: General Biochemistry

Select one physiology or cell biology laboratory course associated with a course selected from above:  
- BIOL 351GW: Experiments in Cell and Molecular Biology - GWAR  
- BIOL 402GW: General Microbiology Laboratory - GWAR  
- BIOL 436: Immunology Laboratory  

Upper-Division Electives

Select four to eight units in consultation with an advisor from among all upper division Biology courses. Only one of the following courses can be included among those selected: BIOL 317, BIOL 327, BIOL 330, and BIOL 349. Up to three units of BIOL 699 can also be used towards the total of four to eight units. All Biology courses that have BIOL 230 and/or BIOL 240 as prerequisites can also be used as electives. This includes courses already listed previously under each of the category subheadings, but not used to satisfy the requirements of those categories.

BIOL 638  Bioinformatics and Genome Annotation  4
BIOL 640  Cellular Neurosciences  3
BIOL 652  Science Education Partners in Biology  4

1 Substitutions allowed upon signed advisor consent.

Note: A minimum of 40 upper-division units must be completed for the degree (including upper-division units required for the major, general education, electives, etc.). A student can complete this major yet not attain the necessary number of upper division units required for graduation. In this case, additional upper-division courses will be needed to reach the required total.

Complementary Studies

Students in the B.A. biology program will satisfy the Complementary Studies Requirement with the completion of courses in chemistry, physics, and mathematics that are required for the major.

Students who have earned AA-T or AS-T degrees and are pursuing a similar B.A. degree at SF State are required to fulfill the Complementary Studies requirement as defined by the major department. Students should consult with a major advisor about how transfer units and/or SF State units can best be applied to this requirement in order to ensure degree completion within 60 units.

SF State Studies

Courses certified as meeting the SF State Studies requirements may be upper or lower division in General Education (GE), in a major or minor, or an elective.

American Ethnic and Racial Minorities (AERM) | UD or UD | 3 |
Transferring from institutions other than CCCs or CSUs

Review SF State's lower division General Education requirements. Note that, as described below, the four basic skills courses required for admission meet A1, A2, A3, and B4 in the SF State GE pattern. Courses
that fulfill the remaining areas of SF State's lower division GE pattern are available at most two-year and four-year colleges and universities.

Of the four required basic skills courses, a course in critical thinking (GE A3) may not be widely offered outside the CCC and CSU systems. Students should attempt to identify and take an appropriate course no later than the term of application to the CSU. To review more information about the A3 requirement, please visit http://bulletin.sfsu.edu/undergraduate-education/general-education/lower-division/#AAEL.

Identify and complete a 2nd-semester written English composition course before transfer. This is usually the next course after the typical "freshman comp" course, with a focus on writing, reading and critical analytical skills for academic purposes, and developing skills in composing, revising, and the use of rhetorical strategies.

Waiting until after transfer to take a single course at SF State that meets both US and CA/local government requirements may be an appropriate option, particularly if transferring from outside of California.

**All students must meet the transfer eligibility requirements outlined below for admission.**

**For more information, visit the Undergraduate Admissions section.**

- Complete 60 or more transferable semester units or 90 or more quarter units
- Earn a college grade point average of 2.00 or better in all transferable courses. Non-local area residents may be held to a higher GPA standard.
- Be in good standing at the last college or university attended
- Complete 30-semester units (45-quarter units) of general education, including four basic skills courses:
  a. One course in oral communication (same as CSU GE Area A1)
  b. One course in written composition (same as CSU GE Area A2)
  c. One course in critical thinking (same as CSU GE Area A3)
  d. One course in mathematics or quantitative reasoning (same as CSU GE Area B4)
- The four basic skills courses and a minimum of 60 transferable semester units (90-quarter units) must be completed by the spring semester prior to fall admission, or by the fall semester prior to spring admission. Earn a "C-" or better grade in each basic skills course.
