ASTRONOMY (ASTR)

ASTR 115 Introduction to Astronomy (Units: 3)
Prerequisite: Category I or II placement for QR/Math, or completion of GE Area B4, or MATH 197.

Introduction to topics in astronomy including Stonehenge, the solar system, the sun, stars, and stellar evolution, pulsars, black holes, nebulae; galaxies, quasars, the big bang, the expanding universe, and the search for extraterrestrial life. Includes the opportunity for telescopic observation.

Course Attributes:
- B1: Physical Science

ASTR 116 Astronomy Laboratory (Unit: 1)
Prerequisite: ASTR 115 (may be taken concurrently).

Fundamentals of astronomical observation including optics and spectroscopy. Planetarium exploration of the stars, sun, and moon. Opportunity for telescopic observation. Laboratory.

ASTR 300 Stars, Planets, and the Milky Way (Units: 3)
Prerequisite: PHYS 121 or PHYS 230 or PHYS 240 with a grade of C or better.

Quantitative study of stars, stellar evolution, and the Milky Way with an emphasis on the observational basis of our knowledge of the Galaxy's structure and contents. Application of Newton's laws to exoplanets, determination of stellar masses, and evidence for dark matter.

ASTR 301 Observational Astronomy Laboratory (Units: 2)
Prerequisites: ASTR 115 or ASTR 300; and PHYS 121 or PHYS 230 or PHYS 240; all with grades of C or better.

Introduction to observational astronomy, including the celestial sphere & coordinate systems on the sky; apparent motions of the Sun, stars, and planets, astronomical magnitudes, astronomical systems of time, using binoculars & telescopes, geometric optics & telescope design, telescope mounts, limitations of telescope observations, astronomical detectors, photometry, spectroscopy. Lecture, 1 unit; laboratory, 1 unit.

ASTR 340GW The Big Bang - GWAR (Units: 3)
Prerequisite: PHYS 121 or PHYS 230 or PHYS 240 with a grade of C or better.

Study of extra-solar planets including history, detection methods, planet formation, and exoplanetary atmospheres. Exploration of statistics of exoplanetary systems, habitability, and placing the Solar System in a larger context.

ASTR 400 Stellar Astrophysics (Units: 3)
Prerequisite for ASTR 700: Graduate standing or permission of the instructor.

Prerequisites for ASTR 400: Upper-division standing; ASTR 300, CSC 309, MATH 245 or MATH 376, and PHYS 320, all with grades of C- or better; GPA of 3.0 or higher; or permission of the instructor.

Introduction to stellar astrophysics: the birth, life, and death of stars, stellar atmospheres and spectra, stellar interiors, energy generation and transport, star formation, stellar evolution and death, the Solar Cycle, and the Sun-Earth connection. (ASTR 700/ASTR 400 is a paired course offering. Students who complete the course at one level may not repeat the course at the other level.)

ASTR 405 Exoplanetary Science (Units: 3)
Prerequisites: PHYS 230 and PHYS 240 with grades of C or better; ASTR 300 with a grade of C- or better (may be taken concurrently).

Study of extra-solar planets including history, detection methods, planet formation, and exoplanetary atmospheres. Exploration of statistics of exoplanetary systems, habitability, and placing the Solar System in a larger context.

ASTR 470 Observational Techniques in Astronomy (Units: 3)
Prerequisites: ASTR 301 and ASTR 300 (may be taken concurrently) with a grade of C- or better; CSC 309 recommended.

Astronomical instrumentation and data analysis with a focus on statistical analysis, CCDs, photometry, spectroscopy, image processing, and instrument design. Lecture, 2 units; laboratory, 1 unit.

ASTR 498 Astronomy Research Literature (Units: 3)
Prerequisite for ASTR 798: Graduate standing or permission of the instructor.

Prerequisites for ASTR 498: Upper-division standing; ASTR 300 and PHYS 320 with grades of C- or better; GPA of 3.0 or higher; or permission of the instructor.

Critical reading and analysis of current peer-reviewed literature in astronomy and astrophysics. Learn about the goals and organization of scientific papers and strategies for reading papers; how to effectively search for and find peer-reviewed publications in astronomy; how to summarize the importance, techniques, and results of papers; and how to effectively communicate this information. Paper topics will vary each semester.

(ASTR 798/ASTR 498 is a paired course offering. Students who complete the course at one level may not repeat the course at the other level.)

ASTR 685 Projects in the Teaching of Astronomy (Unit: 1)
Prerequisites: ASTR 301 or ASTR 470 with a grade of B or better; permission of the instructor.

Methods for effective student teaching in the SF State Observatory and/or Planetarium. Leading of Observatory Open Nights and the development and/or presentation of Planetarium shows. May be repeated for a total of 3 units. (Students may earn a maximum of 4 units toward the baccalaureate degree for any course(s) numbered 685 regardless of discipline.)

ASTR 697 Senior Project (Units: 1-3)
Prerequisite: Senior standing.

Observational or theoretical projects under the direction of department faculty. A written report of the work accomplished is required. May be repeated for a total of 6 units.
ASTR 699 Independent Study (Units: 1-3)
Prerequisites: Advanced Astronomy and Astrophysics majors and minors; approval of the department and permission of the instructor.

Special study in the laboratory, field, or library under the direction of a faculty member. The student must present a written report of the work accomplished to the faculty member and the department. May be repeated for a maximum of 12 units.

ASTR 700 Stellar Astrophysics (Units: 3)
Prerequisite for ASTR 700: Graduate standing or permission of the instructor.
Prerequisites for ASTR 400: Upper-division standing; ASTR 300, CSC 309, MATH 245 or MATH 376, and PHYS 320, all with grades of C- or better; GPA of 3.0 or higher; or permission of the instructor.

Introduction to stellar astrophysics: the birth, life, and death of stars, stellar atmospheres and spectra, stellar interiors, energy generation and transport, star formation, stellar evolution and death, the Solar Cycle, and the Sun-Earth connection. (ASTR 700/ASTR 400 is a paired course offering. Students who complete the course at one level may not repeat the course at the other level.)

ASTR 722 Radiative Processes in Astrophysics (Units: 3)
Prerequisite: Graduate standing or permission of instructor.

Fundamentals of radiative transfer; basic theory of radiation fields; radiation from moving charges; relativistic covariance and kinematics; bremsstrahlung; synchrotron radiation; Compton scattering; plasma effects; atomic structure; radiative transitions; molecular structure. Applications include stellar and planetary atmospheres, circumstellar disks, the interstellar medium, galaxies, active galactic nuclei, and the intergalactic medium.

ASTR 742 Galaxies and Cosmology (Units: 3)
Prerequisites: Graduate standing or permission of the instructor.

Formation and evolution of galaxies and large-scale structure. Models of hierarchical structure formation in a universe dominated by dark matter. Observational constraints from the discovery of the expansion of the universe to ongoing experiments probing the nature of dark energy.

ASTR 770 Observational Techniques in Astronomy Research (Units: 3)
Prerequisite: Graduate standing or permission of the instructor.

Astronomical photometry, spectroscopy, and astrometry in the context of research. Statistical analysis, observational research program design, and proposal writing. Seminar, 2 units; laboratory, 1 unit.

ASTR 798 Astronomy Research Literature (Units: 3)
Prerequisite for ASTR 798: Graduate standing or permission of the instructor.

Critical reading and analysis of current peer-reviewed literature in astronomy and astrophysics. Learn about the goals and organization of scientific papers and strategies for reading papers; how to effectively search for and find peer-reviewed publications in astronomy; how to summarize the importance, techniques, and results of papers; and how to effectively communicate this information. Paper topics will vary each semester. (ASTR 798/ASTR 498 is a paired course offering. Students who complete the course at one level may not repeat the course at the other level.)

ASTR 895 Culminating Project (Units: 3)
Prerequisites: Advancement to Candidacy (ATC) and Proposal for Culminating Experience (PCE) forms must be approved by the Division of Graduate Studies before registration.

Independent and original culminating project in astronomy and astrophysics under faculty supervision leading to written project report and oral defense of the project. Culminating projects could include: development of new teaching/curricular modules, portfolios of science writing/journalism, internships in science museums/planetaria or industrial or national research labs, development of technical reports/manuals for new scientific instruments, etc. (CR/NC, RP)

ASTR 896EXM Culminating Experience Examination (Unit: 0)
Prerequisites: Advancement to Candidacy (ATC) and Proposal for Culminating Experience (PCE) forms must be approved by the Division of Graduate Studies before registration.

Comprehensive oral examination on core topics in astronomy and astrophysics. (CR/NC, RP)

ASTR 897 Research (Units: 1-3)
Prerequisite: Graduate standing.

Independent research under the supervision of faculty. May be repeated. (Plus-minus letter grade, CR/NC, RP)

ASTR 898 Master’s Thesis (Units: 3)
Prerequisites: Advancement to Candidacy (ATC) and Proposal for Culminating Experience (PCE) forms must be approved by the Division of Graduate Studies before registration.

Independent and original experimental, observational, theoretical, or computational research in astronomy and astrophysics under faculty supervision leading to written Master’s Thesis and oral defense of thesis. (CR/NC, RP)

ASTR 899 Independent Study (Units: 1-3)
Prerequisite: Graduate standing.

Independent study under the supervision of faculty. May be repeated. (Plus-minus letter grade, CR/NC, RP)
